Review Report

This is a very interesting article about a new theory of aging. The manuscript describes in an excellent way the role of lymphocytes and some specific populations of T-cells in the process of aging. This paper could be the base for further scientific research in the field of age related changes, and I think that it could be accepted for publication in the current format.

I have read this submission. I believe that I have an appropriate level of expertise to confirm that it is of an acceptable scientific standard.
