Review Report

This article discussed the synthesis of taurine and the biological effects of taurine especially in the liver. The significance of the review is apparent. But there are some problems that should be address extensively.

- The tense is not in accordance with each other in some paragraphs.
- The discussion of taurine synthesis was not complete. Please refer to the article in "J Biol Chem 2011; 286: 32002-32010".
- It is beneficial for the authors if the authors can separate their major parts of the article into different sections, e.g., the synthesis of taurine, its anti inflammation effects, detoxification effects.

I have read this submission. I believe that I have an appropriate level of expertise to confirm that it is of an acceptable scientific standard, however I have significant reservations, as outlined above.
