## Review Report

This is a perspective article on regulation of cell cycle by metabolic signaling. The manuscript is concisely and well written. There are some suggestions.

- It is useful if the authors describe the species differences of the cell cycle signaling more clearly. The findings were obtained from human tissue or other species?
- It will be better if the authors summarize the novel findings and future tasks as bullet points.

I have read this submission. I believe that I have an appropriate level of expertise to confirm that it is of an acceptable scientific standard, however I have significant reservations, as outlined above.
