## Review Report

This study makes a good effort, but there are two brief revisions to be made.

In Abstract section, the aim of the study about the medication use is not clearly mentioned. The author should adjourn the prevalence and incidence data in the Introduction section, and add current reports.

I thank the author for the interesting study.

I have read this submission. I believe that I have an appropriate level of expertise to confirm that it is of an acceptable scientific standard, however I have significant reservations, as outlined above.
