Review Report

Thank you for giving me the opportunity to review this interesting study “Posterior Reversible Encephalopathy Following Primary Debulking Surgery in Ovarian Cancer – Significance of Early Diagnosis and Treatment”.

However, I have some minor comments and recommendations:

- Abstract: Include all key data.
- Introduction: Emphasize the gap of knowledge.
- Case: Mention appropriate details of surgical techniques.
- Discussion: Focus on highly relevant studies.

I have read this submission. I believe that I have an appropriate level of expertise to confirm that it is of an acceptable scientific standard, however I have significant reservations, as outlined above.
