Review Report

The manuscript by Latif Ahmad Peer reviews floral induction in flowering plants with respect to developmental phase changes, photoperiodic control, autonomous pathway, vernalization pathway and hormones in association with the genes playing key roles in the process.

The manuscript is well written and organized. There are some minor revisions, however, that need to be addressed before it can be published.

1. The abstract does not summarize what is in the manuscript. Rather, the abstract is written as a part of introduction (i.e. there is no objective statement for the manuscript and the summary statements of the covered parts are missing).
2. Some typos and grammar mistakes need to be checked and corrected.

I have read this submission. I believe that I have an appropriate level of expertise to confirm that it is of an acceptable scientific standard, however we have significant reservations, as outlined above.
