## Review Report

I recommend publication of this manuscript in Insights in Genetics and Genomics with minor revisions as outlined below.

Overall manuscript is a through and in-depth review of current knowledge of the floral induction mechanisms in plants. However, I would suggest author to modify the title of the review and make it more descriptive to be more indicative of what content is discussed or covered in this review article. Also, if author can add a section of future direction or perspectives to pinpoint existing challenges in this field and focus on new approaches (like genomics or targeted genome engineering approaches, such as the CRISPR/Cas system) to overcome challenges and offer solutions.

I have read this submission. I believe that I have an appropriate level of expertise to confirm that it is of an acceptable scientific standard, however we have significant reservations, as outlined above.
